DETAILED ACTION

This is in response to RCE filed on 7/13/06 in which claims 1-37 are pending. The application has been fully considered therefore this case is in condition for allowance.

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance: the prior arts of record fail to anticipate or render obvious the following recited features: Identifying a spectral component at a symbol frequency F_s away from a DC component of the frequency domain representation of the computed magnitude of the input signal, the spectral component having a magnitude and a phase, and determining the symbol timing phase of the input signal from the phase of the spectral component as recited in claims 1,6 and 12. Determining a frequency domain representation of the computed N.sup.th power of the input signal, the frequency domain representation including spectral components spaced at F_s/N , wherein F_s is a symbol frequency of the input signal; and selecting one of the spectral components as the acquired carrier frequency as recited in claims 18, 25 and 32.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Rahnema U.S. Patent No 5,870,443 teaches a symbol timing recovery.

Kaku et al U.S. Pub No 2003/0138037 A1 teaches a method and apparatus for time equalization.
